    - Display Paragraphs of text with links in them
    - Display links with information about people inside the app (speekers, funding, etc.)
    - Display information about people, who are not yet in the app
    - Add Map positions (event location, hotel, taxi …)
    - Add Pictures (shown on the page)
    - Add Files (A link to open them with File System)
    - Display date and time to be added to your calendar
- Enroll Button
- Rate Button
- Show people who are taking part

NEW EVENT

- All the event functionality
- Modify the design
- People who can edit: organisator, administrator(moderator), volunteers

PROFILE

- Profile Picture
- Name, Short description
- Events you have created, events you took (take) part in, events you rated
- Add to friends button
- Message button

CALENDAR

- Too god damn much stuff to do to write any description

MAP

- Show map with events on it (one event for start)
- Make the event disappear when you scale too far back (refresh every time you scale or move)
- Make the events on map clickable
- Add the ability to add new positions (used when creating events)

FILE SYSTEM

- Open using inner React-Native functionality or with an inner browser instance
    - pictures
    - .pdf .pptx .doc
    - .html .txt

MESSAGES

- Well

SETTINGS

- No one needs personalization in a perfect application

BACK-END

USERS

id	integer	not null, nextval('users_id_seq'::regclass), primary key
username	character varying(128)	not null, unique constraint
email	character varying(128)	unique constraint
pw_hash	character varying(128)	
uuid	character varying(128)	unique constraint

EVENTS

id	integer	not null, nextval('users_id_seq'::regclass), primary key
name	character varying(128)	not null, unique constraint
startdate	date	
enddate	date	
image	character varying	
description	text	
address	character varying	
transfer	text	
timetable	text	

- Add the organisator field
- Change date to datetime
- Change address to 2 numbers: lat & lng (from 0 to 360, precision up to 6 digits after floating point)
- Make it possible to start participating in an event, show participants, remove participant
  - Add connection between 2 tables
- ? Add the functionality to add custom information to the event
  - Remove transfer from table columns
  - ? Create a separate table for this
  - ? Add all the functions

- Find out if we need any other columns in the events table
